

TAMARACK Ventilation

Introducing The Fireplace Plug

The Fireplace Plug is designed to seal what is often the largest hole in your home. Even with the damper closed, most fireplaces allow massive amounts of conditioned air to escape. The heat or air conditioning that you have paid for can easily escape up the chimney and drive up the cost of keeping your home comfortable. There are times when the pressure differences will allow outside air into your home – also impacting your heating and AC system.

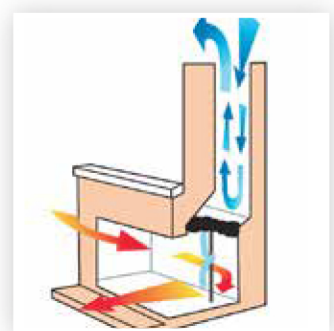

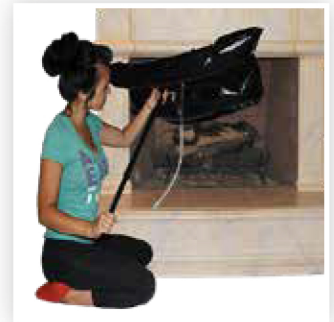

- Installs in just a few minutes – Anyone can do it.
- Assemble – Inflate – Install – Be more comfortable.
- The inflatable pillow is designed to fit most fireplaces.
- Friction fit – No tools needed.
- Easily removed when you want to use the fireplace – Simple to take out and store.
- Reduce heat and AC loss – Save \$\$ every year.

Two models available:

- Rectangular for brick fireplaces.
- Round for metal fireboxes.
- Made in the USA.

18" x 38"
Brick Fireboxes
Rectangle Dampers
