

TAMARACK Ventilation

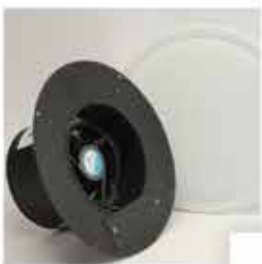

The Mainstream

Introducing **The Mainstream** – a drop in replacement fan for manufactured homes from Tamarack Ventilation. Replacing your noisy bath fan with **The Mainstream** will result in quieter exhaust that will operate with lower electricity use – saving you money. **The Mainstream** features a spring loaded backdraft damper that closes tight when the fan is not in use. Outside air will no longer leak back into your bathroom.

The Mainstream is rated for continuous use and can be run for extended times to exhaust moisture left behind in the bathroom. This is a good way to stop the build up of mold and keep your bathroom healthy and fresh.
