

TAMARACK Ventilation

Whole House Fans

Tamarack's Whole House Fans provide a cost effective way to cool your home and avoid the use of expensive air conditioning. Operate these fans when the outside temperature is cooler than the inside. By pushing indoor stale air into the attic where it exits through ridge, soffit or gable vents, fresh and cool outside air is introduced to your living environment. Insulated doors close and seal when not in use saving money on energy bills.

- Easy Installation – fits 16" or 24" on center framing
- Super insulated doors seal when not in use
- Choose R38 or R50 insulation level
- All units include a white ceiling grill
- Remote controls (2) supplied with larger 2-speed models
- 3 year limited warranty (*HV3400 has a 1-year limited warranty*)

Recommended models for your house size:

Less than 1500 square feet:

HV1000, circulates 1000 CFM*

Single speed – gets wired to a wall switch for on/off

1500 – 2500 square feet:

HV-1600, circulates 1530 CFM* on high

2-speed fan – includes 2 remote controls

Greater than 2500 square feet:

HV-3400, circulates 3400 CFM* on high

2-speed fan – includes 2 remote controls

Larger homes, or unusual room layouts will often require 2 fans to effectively cool the space.

* CFM rates are tested to HVI 916 and listed with the CEC. Actual performance is dependent on the net free area in the attic and installation details.

HV-1000 / 1600

HV-3400
